

WATER SCULPTURE

Water Sculpture's fine jets of water arc into cone-shaped vessels to form a dynamic yet contemplative 'screen'. Visible water is linear and carefully controlled whilst the more chaotic pooling water is collected and hidden from view in the stainless steel cones.

Paired arcs of water from three jets enter each vessel. The water released from the base of the cones incrementally increases in flow and thickness with each descending tier. The water, sculpted by its fall through the screen, finally disappears into discrete spiral holes in the ground.

Artists
Jennifer Turpin & Michaelie Crawford

Date
1995

Description
Water sculpture, 13metres high

Materials
Stainless steel, water

Location
The New International Airport, Brisbane

Client
Federal Airports Corporation (FAC)
